

Fulvica

It has a very low Molecular weight which facilitates Penetration into plants. Nutrients can be quickly delivered to all sites within the plant, correcting deficiencies and restoring natural balance.

To increase the number of internodes or flower sites a plant produces, Fulvic acid can be foliar sprayed as soon as the first flower sites appear. Fulvic acid applications will also slow down the vertical growth of plants.

COMPOSITION:

Fulvic Acid	:	12%
Protein	:	2%
Carbohydrates	:	5%
Oter Ingredients	:	
(Inter Material)	:	81%

DOSE :

Mix 30 ml per acre with applied nitrogen. Apply 20 ml per acre at planting in your starter solution.

2.5 ml-3ml/Liter of water in Folior Application.
